Pavo is an international manufacturer of office products. Pavo was co-founded in 1997 by Valentijn Jansen who started the business with production and distribution of binding combs. Today our product range has expanded over 1500 products!

Our assortment contains products for conference, presentation, security, office stationery, desktop accessories, counterfeit, packaging, facilities supplies, mailroom supplies, warehousing & travel. We produce our products in our own Pavo brand and various private label brands.

Our head office is based in Oss, The Netherlands. We sell our products in more than 35 countries to different types of distributors. Our international presence has made us able to see various local requirements and translate those into functions. We want consumers not only using our products but also enjoying to use them. Over the past years, this has driven us to develop our products and made us where we are now.

Guided by the belief that every child has the right to education with equal value to succeed in life – and inspired by others – Pavo Foundaton was founded and registered in April 2015.

Pavo Foundation supports “TI GREN LAVI Haiti”. One of their projects is “Ecole du village” a school located in Torbeck, Haiti. The school is founded for unprivileged children to give them a better chance in life. Schools in Haiti are relative expensive, just a few parents can afford their children to gain education. Currently 54% of the inhabitants is illiterate!

“Ecole du village a Torbeck” provides free education and food for children between 2 and 14 years old. Today there are 96 elementary school students and the school continues to grow.

pavo
GREEN CHOICE

bio-degradable pp products

Every year Millions Tons of plastic is wasted all over the world, 80% of this is sent to landfill where it can remain for decades.

Pavo is introducing a complete line of biodegradable PP filing and storage products. These products can biodegrade in two or three years wherever oxygen is present. So if the products are disposed of they will biodegrade fully until there is nothing more than CO₂, water and humus and no solid plastic waste will be left behind. The products can biodegrade because of a special formulation which is used in the production process. One special additive is used in this process.

This additive permits the living micro-organisms, such as bacteria and fungi, access to the carbon and hydrogen. This process is called OXO-degradation. It is therefore biodegradable. This OXO-biodegradable PP can also be recycled.

206 kilogram carbon footprint is reduced for every 1 kilogram additive into the PP production process.

cold laminating sheets

laminating pouches • pochettes à plastifier • laminiertaschen • lamineerhoezen • fundas para plastificación
 • bolsas di plastificar • pouches per plastificatrici • bolsa de plastificação • folie laminacyjne • ورق ترمال لم يفسد • 塑封膜

Cold laminating in easy steps:

1. Make sure all the supplies are ready; cold laminating sheets, your personal (photo) document, a laminator with cold (roller) function and cutting materials.
2. Fold a small line on the top of the sheet. This way a part of the adhesive strip is uncovered.
3. Place the uncovered strip on the document that needs to be laminated.
4. Enter the pasted strip into the laminator.
5. Remove the paperback of the sheet and place the adhesive sheet over the top of the laminator backwards.
6. Turn the rollers of the laminator on. The document and adhesive sheet are automatically transported through the rollers so that the sheet is pressed on the document.
7. After the laminated document is released you can cut it to the required size.
8. Tadaa! Your document is finished.

<https://youtu.be/8S3BF4rZPCo>

The Pavo laminating film rolls are available in different sizes and thickness to match the level of protection you need. It will keep your machine running for the best results.

100 keys

Don't have the worries for wondering where you have left the keys. Enjoy the perfectly organized and labeled keys, which are available for co-workers, customers etc.
All Pavo key cabinets are designed with a key return gap, which is easy for storing your key when the clerk has gone out. Very clever and absolutely unique! Available in different sizes, finish and locks.

Lock your valuables safely with a padlock.

A padlock has a steel case that can be closed with a hardened steel shackle and key or combination lock.

TSA locks are required for travelling to the USA. Nobody has access to your belongings only the customs, using a master key. After inspection the lock can be closed and your belongings are locked and safe again.

**FILING &
STORAGE**

bio-degradable pp products

Every year Millions Tons of plastic is wasted all over the world, 80% of this is sent to landfill where it can remain for decades.

Pavo is introducing a complete line of biodegradable PP filing and storage products. These products can biodegrade in two or three years wherever oxygene is present. So if the products are disposed of they will biodegrade fully until there is nothing more than CO₂, water and humus and no solid plastic waste will be left behind. The products can biodegrade because of a special formulation which is used in the production process. One special additive is used in this process.

This additive permits the living micro-organisms, such as bacteria and fungi, access to the carbon and hydrogen. This process is called OXO-degradation. It is therefore biodegradable. This OXO-biodegradable PP can also be recycled.

206 kilogram carbon footprint is reduced for every 1 kilogram additive into the PP production process.
